

RESULT

The CO5-AT3 DAA Mock Interview was successfully completed with 10 technical questions covering Backtracking, State-Space Trees, N-Queens, Subset Sum, Hamiltonian Cycle, Graph Coloring, P/NP concepts, Polynomial-Time Reduction, Time Complexity, and Greedy Algorithms.

The candidate demonstrated strong technical knowledge, problem-solving ability, and analytical thinking. The answers were generally correct, relevant, and clearly explained with appropriate examples and complexity analysis.

Overall Score: 91/100

Performance Level: Excellent

Strengths:

- Good understanding of core DAA concepts.
- Correct explanation of backtracking and its applications.
- Strong knowledge of NP, NP-Hard, and NP-Complete problems.
- Good understanding of algorithm complexity.
- Clear problem-solving approach.

Areas for Improvement:

- Improve answer conciseness during technical interviews.
- Use more precise terminology in theoretical concepts.
- Maintain clarity while concluding longer answers.

Conclusion:

The candidate has demonstrated an excellent understanding of Design and Analysis of Algorithms and is capable of applying algorithmic concepts to problem-solving scenarios.
